## S07A (JW5) Light Weight Front Pulley KIT

## S07A (JW5) Light Weight Front Pulley KIT

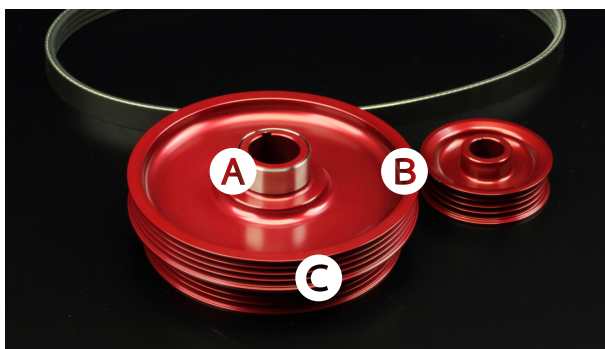

13810-JW5-HAC 40,000 JPY

Developed to give lighter and sportier engine characteristic. By reducing the overall weight (and inertia) of the pulleys, and by modifying the pulley ratio to take advantage of the more sporty use, the burden on the engine is reduced helping to improve acceleration performance.

Crank pulley weight: approx. 600g (STD approx. 1700g)

ACG pulley weight: approx. 70g (STD approx. 200g)

\*Enclosed ACG belt is a modified length.

**A 2 pieces structure**

A good affinity material is used on the oil seal face of the crank pulley to reduce friction improving sealing and to reduce wear.

**B Duralumin A-7075**

A hard base material is used to reduce wear increasing longevity of the pulleys and helping to prevent damage such as stone chips.

**C Red anodizing (Alumite)**

These red anodized pulleys help to enhance the appearance of the engine bay.

**Color variation**

You can customize Light Weight Front Pulley KIT with special color with additional ¥5,000 when you order.
