TODA S2000 F20/22C Heavy Duty Chain Tensioner

Toda Racings Heavy Duty Chain Tensioner is released for the S2000 F20/22C engine.

The standard tensioner works well under standard conditions i.e totally stock engine under normal street driving conditions. But when any modifications are done for example milling of up to 1mm from the cylinder head or installing high lift camshafts or if the stock engine is regular run under race type conditions then the tensioners performance may not be maintained.

Toda Racings Heavy Duty Chain Tensioner has been designed to deal with these adverse conditions with its smoother action helping to prevent in the worst case scenarios valve to piston touching.

The above photo shows the Heavy Duty Chain Tensioner set for installing (Bolts in the back of the tensioner is used to prevent the piston coming out). Once installed the bolt and nut are to be removed and the cap is fitted.

F20/22C Heavy Duty Chain Tensioner 14510-F20-000 List price 22,000 yen
